Application

User interface for mobile devices such as tablets or smartphones to control and visualise all AFRISO smart home building automation sensors and actuators.
The AFRISOhome app allows for integration and interoperation of devices based on the wireless standards EnOcean®, Z-Wave, WLAN and Zigbee. This allows for almost limitless automation. Visit www.afrisohome.de for a detailed list of devices.

Description

All wireless devices, sensors and actuators integrated into a smart home system can be easily divided into groups by means of AFRISOhome gateways. Actuators in rooms, buildings, etc. can be defined as groups.
The access rights for the various groups can be configured separately for mobile devices.
After selection of a group, the display of the mobile device shows the various wireless products. The user is provided with a clear overview of the current situation of the smart home system. Logic states, temperature values, information on the air quality and buttons for the actuators are displayed, among other things.

AFRISOhome gateways with the AFRISOhome app provide for countless combination possibilities in wireless building automation. AFRISO offers reliable, safe and innovative devices with EnOcean® wireless modules. It is also possible to integrate other products of the EnOcean® Alliance into your building automation system. With currently more than 80 compatible devices, the AFRISOhome gateway HG 02 provides great versatility. Along with the optional extension modules Z-Wave and Zigbee, the AFRISO smart home integrates more than 250 devices.
